EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with applicant assigned representative Mr. James Blanchette, Registration Number 51,477 on February 11th, 2011.

CLAIM'S AMENDMENT

The application has been amended as follows:

Claim 1. (CURRENTLY AMENDED) A method for selecting a coprocessor from a plurality of coprocessors to process a packet, the method comprising steps of:

determining a size of the packet;

determining a cost associated with the packet in response to the size of the packet, the cost representing a load associated with processing the packet;

determining, by a processor, an anticipated load for each coprocessor in the plurality of coprocessors using the cost; and

selecting, by the processor, the coprocessor from the plurality of coprocessors based on the anticipated load.

Claim 22. (CURRENTLY AMENDED) A non-transitory computer readable media comprising computer executable instructions for execution in a processor for selecting a coprocessor from a plurality of coprocessors to process a packet, the instructions for:

determining a size of the packet, and determining a cost associated with the packet in response to the size of the packet, the cost representing a load associated with processing the packet;

determining an anticipated load for each coprocessor in the plurality of coprocessors using the cost; and

selecting the coprocessor from the plurality of coprocessors based on the anticipated load.

Claim 23. (CURRENTLY AMENDED) A method for selecting a processor for processing a packet, the method comprising steps of:

determining a size of the packet;

determining a cost associated with the packet of that size, the cost representing a load associated with processing the packet;

determining, by a module of an intermediate node, an anticipated load for the processor using the cost of the packet if processed by the processor; and

selecting, by the module of the intermediate node, the processor based on the anticipated load.

Claim 26. (CURRENTLY AMENDED) A method for selecting a coprocessor from a plurality of coprocessors to perform a processing operation on a received packet, the method comprising steps of:

determining a cumulative load for each coprocessor, the cumulative load representing load due to packets currently awaiting processing at that coprocessor;

determining a size of the received packet;

determining a cost for processing the received packet at each coprocessor, the cost determined, at least in part, in response to the size of the received packet and a processing rate of that coprocessor;

combining the cumulative load and the cost at each coprocessor, to create an anticipated load for each coprocessor;

comparing, by a processor, the anticipated loads of all the coprocessors; and

selecting, by the processor, in response to the comparing, a particular coprocessor of the plurality of coprocessors to perform the processing operation on the received packet.
